Product Requirements Document

Project	FFIE — Federation mobile application
Version	v0.2 — Draft
Date	April 30, 2026
Lead PM	Paul Granger
Secondary PM	TBC
Status	 In Progress
Last Updated	30/04/2026

1. Executive Summary

This document is the draft Product Requirements Document (PRD) for the FFIE mobile application project. It must be completed by the Project Managers in collaboration with the technical, design, and business teams.

Product Vision

Develop a native iOS and Android mobile application for the Fédération Française des Intégrateurs Électriciens (FFIE), in order to strengthen communication with its members and promote electrical trades to the general public. The application will offer a news feed, secure access to a professional documentary library for members, and a public section presenting the sector's trades.

Primary Objective

Deliver Phase 1 of the application (news feed, documentary library, trades section, back-office, management of the 3 user profiles) within an estimated timeframe of 4 to 5 months after signature of the agreement (signature obtained on 23/04/2026).

2. Context & Problem Statement

2.1 Business Context

FFIE (Fédération Française des Intégrateurs Électriciens) is a French professional federation in the electricity sector. It wishes to acquire a mobile application to: (1) strengthen communication with its members through a dedicated mobile channel, (2) centralize access to its professional documentary library, and (3) promote electrical trades to the general public

2.2 User Problem

Three user profiles identified in the proposal: FFIE member, non-member company, general public. Needs expressed by FFIE: top-down communication with members (news, press releases, events), mobile access to reserved documentary resources, readability of the sector's trades for the general public.

2.3 Opportunity

TBC

3. Target Users & Personas

3.1 Primary Persona

Persona #1 — FFIE Member

Role: Electrical integrator member of FFIE
Age: TBC • Industry: Electricity / professional B2B

Goals

- Quickly access, from mobile, the professional documentary resources reserved for members
- Stay informed in real time about the federation's news, press releases, and events

Pain Points

- Difficult to access the FFIE documentary library from mobile (TBC)
- No dedicated mobile channel for federation communications (TBC)

3.2 Secondary Persona

Two secondary profiles identified in the proposal: (1) Non-member company — limited access to public content and information on membership; (2) General public — free consultation of the “Discover electrical trades” section (job sheets, educational content, presentation videos).

4. Feature Scope

4.1 Feature Priorities (MoSCoW)

Priority	Feature	Estimated Complexity
● Must	Authentication + 3-profile user management (member / non-member company / general public) + FFIE administration back-office	18 JH (auth 4 + profiles nav 4 + back-office 10)
● Must	News feed + article details + documentary library (integration, consultation, download) + “Discover the trades” section + integrated video player + partners module (Qualifelec, Consuel, OPPBTP) + push notifications + partial offline cache + GDPR compliance	32.5 JH (news 5 + article 2 + doc lib 6 + download 5 + trades 4 + video 2 + partners 1.5 + push 3 + cache 2 + GDPR 2)
● Should	Interactive tutorials space (video tutorials, practical sheets, technical guides) with navigation and classification	9 JH (tutorials 6 + nav/classification 3)
● Should	Technical calculators framework + first business tools (power, sizing, standards — exact calculators list TBC with FFIE)	12 JH (framework 6 + first calculators 6)
● Could	TBC — post-Phase 2 evolutions not specified in the proposal (to scope with FFIE at end of Phase 1)	TBC
● Won't	Out of scope: payment / subscription, e-commerce, ticketing / customer service, in-app messaging between members, forum / internal social network, AI / conversational assistant, public external API	N/A

4.2 Core User Stories

Format: As a [persona], I want [action] so that [benefit].

- US-01: As an FFIE member, I want to log in with my credentials to access reserved resources (complete documentary library, member communications). (Acceptance Criteria: TBC — to be drafted in step 4 “Functional WBS” based on the FFIE specs.)
- US-02: As an FFIE member, I want to consult the news feed and receive push notifications when new publications are released, in order to stay informed in real time

about the federation's news, press releases, and events. (Acceptance Criteria: TBC — to be drafted in step 4.)

- US-03: As a general public visitor, I want to discover electrical trades through job sheets, educational content, and presentation videos, in order to learn about the profession without needing to create a member account. (Acceptance Criteria: TBC — to be drafted in step 4.)

6. Roadmap & Planning

6.1 Project Phases

Phase	Duration	Team	Deliverables
Phase 0 — Scoping & Design (proposal Phase 1)	13 proposal person-days (TBC in weeks)	PM (Paul), Designer	Structured specifications document, functional specifications, technical architecture, wireframes + Figma UX/UI mockups
Phase 1 — Foundations + Mobile P1 (proposal Phases 2+3+4)	67.5 proposal person-days (TBC in weeks)	PM, Devs (mobile, back), DevOps	Backend + member database integration API + auth + administration back-office. iOS+Android mobile apps with news feed, documentary library, trades section, video player, partners, push, cache, GDPR.
Phase 2 — Evolutions + Tests & Deployment (proposal Phases 5+6)	29 proposal person-days (TBC in weeks)	PM, Devs + QA + DevOps	Interactive tutorials space + calculators framework + first business tools. Functional tests + corrections, Apple + Google store publication.
Phase 3 — Documentation & Transfer (proposal Phase 7)	4.5 proposal person-days (TBC in weeks)	PM, Dev, FFIE teams	Technical documentation (architecture, API, maintenance) + user guide. Back-office training session for FFIE teams.
